

Market Weighted Index (MWI)

Objective & Approach

Securo Finance Market Weighted Index (MWI) is a tokenised crypto index fund on Avalanche network, which tracks major crypto assets, such as Bitcoin, Ethereum, Avalanche and USDT according to market dominance.

By removing complicated processes and entry barriers to Decentralized Finance, Securo Finance provides easy and seamless investment vehicles with major crypto assets. This strategy aims to give exposure to the top cryptocurrencies, and auto-compounding WAVAX rewards on top of it as extra profit. This index fund is a secure way to earn profit with top cryptocurrencies.

Asset Allocation

	WBTC	Bitcoin	45%
	WETH	Ethereum	35%
	AVAX	Avalanche	15%
	USDT	USDT	5%

Auto-compound Reward

 **AVALANCHE** (WAVAX)

Risks

Medium Investing in the crypto asset market offers massive potential upside, but the historic data shows that there is a fair amount of volatility compared to traditional investment assets. While this fund is composed of carefully selected crypto assets according to the market dominance, the probability or uncertainty of losses still remains.

A standard risk when it comes to providing liquidity on decentralized exchanges in any DeFi investment is impermanent loss. Impermanent loss occurs when a token price changes after the investor deposits assets in a liquidity pool.

Time Frame

 Long Term

This fund aims to capture expected gains in the broader crypto market with relatively lower risk, by diversifying the portfolio. By automatically compounding the liquidity pool rewards regularly, the fund constantly mitigates the loss from purely holding single assets, while getting benefit from long-term market growth.

Fees

20% from profit.
